

who is **crm** for?

a crm system gives everyone — from sales, customer service, business development, recruiting, marketing, or any other line of business — a better way to manage the external interactions and relationships that drive success. **A CRM tool lets you store customer and prospect contact information, identify sales opportunities, record service issues, and manage marketing campaigns, all in one central location** — and make information about every customer interaction available to anyone at your company who might need it.

With visibility and easy access to data, it's easier to collaborate and increase productivity. Everyone in your company can see how customers have been communicated with, what they've bought, when they last purchased, what they paid, and so much more. **CRM can help companies of all sizes drive business growth, and it can be especially beneficial to a small business, where teams often need to find ways to do more with less.**

what is crm??

customer relationship management (CRM) is a technology for managing all your company's relationships and interactions with customers and potential customers. The goal is simple: Improve business relationships to grow your business. A CRM system helps companies stay connected to customers, streamline processes, and improve profitability.

when people talk about CRM, they are usually referring to a CRM system, a tool that helps with contact management, sales management, agent productivity, and more. CRM tools can now be used to manage customer relationships across the entire customer lifecycle, spanning marketing, sales, digital commerce, and customer service interactions.

more administration **means**
less time for everything else.

main benefits:

identify and categorize leads.

increase customer lifetime value by understanding your customer's needs and be able better to upsell and cross-sell

offer better customer support and service being able to visualize information faster.

improve products and services.

**pros and cons of top 3
CRMs.**

HubSpot

PROS

- **Connectivity:** can easily connect to marketing, sales and service hubs.
- **Track pipeline:** allows to sort deals, create reports or track performance.
- **Log activity:** tracks interactions with prospects.
- **Free usage:** you can use free version.

CONS

- **Basic reporting:** tools don't offer as much depth as they could.
- **Newly emerged:** it doesn't have all the features that more established crm's do.
- **Limited depth:** each tool might not have much depth.
- **Lacks flexibility:** companies with highly complex processes might not be able to adapt.

salesforce

PROS

- **Customizable dashboard:** it gives you a huge range of report widgets
- **Easy to navigate software:** the flexibility and usability of the software is good.
- **Social Capabilities:** the tool's social media function and news feed operate very much like Facebook.

CONS

- **Complexity:** its software's greatest strength becomes its greatest weakness as well
- **Pricing:** for small businesses, it might be an issue.
- **Tricky Reporting:** when using Salesforce, sometimes reporting even just the basic information and data can be tricky.

LinkedIn Sales Navigator

PROS

- **Sales functions:** You can mail LinkedIn emails, actions, and messages back into relevant elements in CRM.
- **Prospecting detail:** customize and save your searches which is extremely important for prospecting purposes.

CONS

- **High cost:** LinkedIn Sales Navigator is a high-cost software.
- **Time Consuming:** consumers have to put up with a long time to get their search results.

CRM software can inform you about your customers and how they move through your sales funnel, helping you improve the customer experience from prospect to buyer.

a crm funnel mirrors a sales funnel, tracking leads as they move closer to becoming paying customers.

**crm funnels can help
automate the closing of a
sale, keeping sales teams
informed of customer needs
and behavior.**

automating sales at each
stage of the CRM funnel can
improve efficiency and drive
more sales.

how to set up my crm system?

email integration

If you're looking for a quick win, this is it. Connecting the CRM to your email is easy to do, and as soon as it's set up, all the emails you send and receive will automatically be stored in your CRM.

What it is

There are two parts to the email integration: the inbox connection and the email extension.

Connecting your inbox to the CRM makes it possible for you to send emails from individual contact records, and it unlocks a host of other features, including automatic logging of email replies.

The email extension puts CRM features inside your Google inbox. This way, you can look up contact records, log emails, and use other tools (like email templates and meeting links) without leaving your inbox.

Why it matters

The email integration will save you a lot of time. You won't have to worry about manually recording the emails you send and receive. Instead, all your email activity will automatically be recorded inside the CRM.

How it works

If you're using Google you can connect your inbox using your account credentials. If you're using a different email provider, you can connect your inbox using IMAP. Either way, once the connection is set up, your CRM and your email inbox will keep each other up to date on the emails you send and receive with your contacts.

This is a great first step toward using HubSpot CRM. A CRM without any data in it is just an empty box. It's impossible to tell if it will meet your needs until you start using it. The email integration will give you data without any additional work on your end, and then you'll be able to start using the CRM to organize that data. If you use Gmail, you'll install a Chrome extension that puts the CRM tools into your Gmail inbox anytime you access it through Chrome. Once you have the email extension installed, you'll be able to automatically log emails in the CRM. You'll also be able to track the emails you send, so you'll know if your contacts are opening them. This is a key insight into how engaged your contacts are.

create filters

After you connect your email to the CRM, you'll get a contact record for each person you send an email to. As you get more and more contacts, you'll need a way to organize them. Time to learn to filter!

What it is

HubSpot CRM filters records in real time. This means you can pull together lists of similar contacts based on any information in the CRM.

Why it matters

Perhaps the biggest benefit of having a CRM is the ability to organize your data in actionable ways. You can use the instantaneous filtering in HubSpot CRM to identify which contacts you should be focusing on and to make sure nothing falls through the cracks.

How it works

Every record in HubSpot CRM has a bunch of properties that hold little bits of information. For contacts, these are things like their name, email address, and company. If you've only been using the email integration, many of these properties will be blank, but you'll still be able to quickly filter your contacts based on the emails you've been sending and receiving. For example:

- Recent sales email opened - This property stores the date of the last time a contact opened a tracked email from you. You can filter your contacts based on this property to find the people you haven't emailed recently and see what's going on with them.
- Recent sales email replied - This property stores the date of the last time a contact replied to one of your emails. If it's blank, then you know they've never replied to you. If this is a person you've reached out to multiple times, it might be time to find a new point of contact. There's also a Number of times contacted property that shows you the number of times you've reached out to each person. Used together, you can get very strategic about where you focus your efforts.

The more data you put into HubSpot CRM, the more sophisticated you can get with your filters. So if you find you like filters, you'll probably want to import your old records (which is what we'll do in the next step).

import contacts

In steps 1 and 2, you were able to dip your toe into the water of CRM and see what it was like. If you've decided you're ready to take a deeper look, then it's time to move your historical records from your old system into HubSpot

What it is

Importing is a way to take the information you have about your contacts and bring them inside of HubSpot. If you have information about people you're working with, you can import them as contacts. You can also import information about companies and sales (deals).

Why it matters

As we saw with filtering, the CRM's value is limited by the amount of data you store in it. As you put more information into the CRM, you'll be able to organize it more precisely, and ultimately that will turn into better focus in your outreach and better results from your efforts.

How it works

You can import contacts from a spreadsheet or directly from your Gmail contacts. If you use a spreadsheet, you'll need to create a column for every property you want to import information into. This gives you the ability to fill in as much information as you want from a single import rather than creating individual contacts one at a time.

define your ideal stages

In addition to organizing your contacts, you need to organize your sales. As you guide people through your sales process, deals will help you keep track of everyone's progress. But deals are most helpful if you customize them to match your sales process, and that's where deal stages come in.

What it is

The deal stages inside HubSpot CRM should represent the steps of your sales process. The CRM comes with default stages, but deals as a whole will be much more helpful if you customize these steps to match your sales process.

Why it matters

In sales, you have to manage multiple relationships simultaneously. It can be hard to keep track of the progress of individual prospects. You can use deal stages to lay out your sales process visually, and then you can drag and drop individual deals from one stage to the next. This way, you can see where each potential sale is and identify roadblocks.

How it works

When you're helping a person progress toward becoming your customer, there are specific actions you need to help them take. If you understand what those actions are and what order they need to happen in, then you can create a deal stage for each one of those. Then, anytime you're working on a potential sale, create a deal and move it from one stage to the next.

When you create your deal stages, you'll need to give each one a name and a probability. The probability is the likelihood that a deal in that stage will end up closing. This information is used to calculate the deal forecast on your sales dashboard.

If you're unsure what the likelihood is, it might be easier to think of that percentage as how far through the sales process a deal in that stage is. So if your first stage is Appointment Scheduled, that's not very far into the sales process, so you could call it 10%. But further down the pipeline, a stage like Contract Sent might be right at the finish line, so you could call it 90%. This is a good approximation to help you get started. You can always adjust the probabilities later on if needed.

invite your teams

Now that you've gotten your CRM fully set up, it's time to invite your teammates to join the party!

What it is

Inviting team members gives them access to the information inside your CRM. You can also control their level of access, limiting them to certain parts of the CRM and controlling whether they can edit or only view the information there.

Why it matters

Perhaps the most important job a CRM can do is give shared visibility across a team. Your marketing, sales, and customer service teams should have a single system of record for customer information. HubSpot CRM does that job well, but only if the necessary employees have access to it. By inviting your team to join you inside the CRM, you're taking the first step toward unifying your company in service of your customers.

How it works

You can add as many users as you want to HubSpot CRM, and you can control the level of access they'll have. Once you do, they'll receive an email with instructions for logging in.

**regardless of the CRM you're
using, the overall process
is similar if not the same!**

how to embed sales funnel into your crm

what is a deal in crm?

Deals are used to track your sales. They are organized into columns that represent the different stages of your sales process. The CRM comes with some default deal stages already set up. You're certainly encouraged to customize the deal stages to represent your own sales process.

If you don't know how to express your sales process as a series of columns, don't worry, with a bit of work you'll figure it out!

STAGE NAME	WIN PROBABILITY	UPDATE STAGE PROPERTIES
Initial Contact	10%	
Meeting Scheduled	30%	
Proposal Sent	40%	Amount and Deal name
Analysing Proposal	50%	
Contract Sent	70%	
On Hold	30%	
Closed Won	Won	Closed won reason
Delivery of Services	Won	
Closed Lost	Lost	Closed lost reason

1. Initial Contact: You got in touch with your Lead. Doesn't mean much, could go well or could not.

2. Meeting Scheduled: Your prospect is interested in hearing more about your products / services.

3. Proposal Sent: You've had a successful meeting and have sent your prospect a proposal.

4. Analyzing Proposal: Your prospect is reviewing you proposal and came back with some questions

5. Contract Sent: Your proposal was accepted and you're now ready to sign a contract.

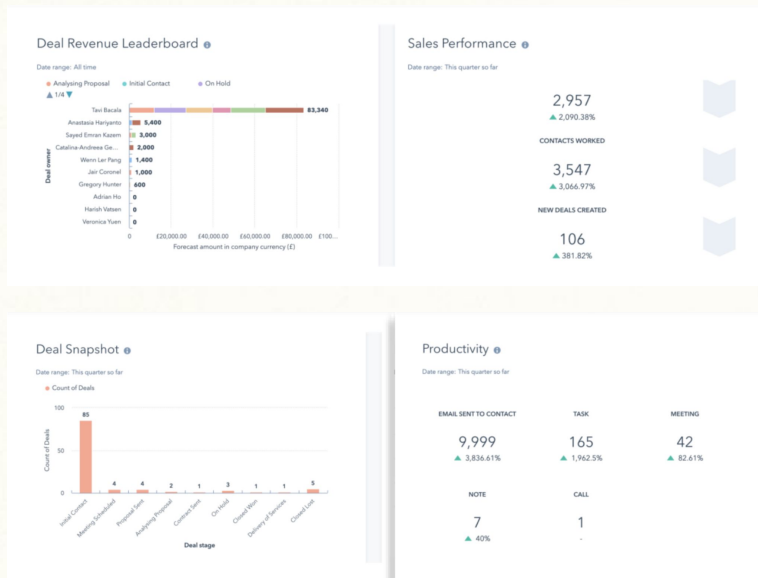

6. On Hold: For whatever reason, the deal has been pushed to a later date but is not dead.

7. Closed Won: Contract has been signed & you're now ready to deliver

8. Delivery of Services: You've aligned on dates/timeline with your Partner and have now started delivering

9. Closed Lost: Prospect is not interested but has left some remarks (ex. No Budget this year, restructuring, Not interested. They might give some hints such as come back next year or don't re-contact.)

dashboard example

The solve purpose of existence of a dashboard is to pinpoint the key metrics you want to be tracking.

Deal Revenue Leaderboard: now that you've set-up a sales funnel, you can easily view it as well as overall revenue forecast of you or your team.

Sales Performance: Depending on which sales strategy you use (push or pull, you can view the progress & overall impact of your efforts when it comes to generating leads)

Deal Snapshot: You can easily track how your sales funnel looks like, how many deals you have pending and what's you overall sales funnel looking like.

Productivity: This is a good way to measure interaction between your sales team & potential customers / partners. Each individual has his/her own style and it's good to review it every now and then so you can learn from each other and close deals like never before!
