

MX KPI formula

how much you understand what a specific mx data is telling you?

when we are talking
about data..

especially mx ones..

progress measure

process measure

when we are talking
about data..

especially mx ones..

progress measure

it underline the progress aka the final
results of actions.

the output.

when we are talking
about data..

especially mx ones..

process measure

it underline what is the development
affecting the final results.

what are the mx kpis?

what are the actions behind?

nps & lps

measure of **progress**

NPS: $(\% \text{ promoters} - \% \text{ detractors}) / 10$. For example, if 50% of respondents are Promoters, 10% are Detractors, and 40% are passives, your NPS would be $(50-10)/10=4$

LPS: $(\text{sum of the \#answer}) / \# \text{ response rate}$

nps: how much they would suggest aiesec experience

lps: how would they suggest aiesec as a leadership development experience

underlines the effectiveness of all the processes/kpis that develops **satisfactions** and **leadership perception** in our membership.

#adv

measure of **progress**

how many people **got accepted for higher roles**

It gives us clarity on how well we were able to **convert our pipeline**, and gives us the opportunity not only to understand how many people we have in leadership position in that area, but also to **forecast the future talent capacity** that we can/will have in that specific area, and what are the management capacity we should develop to ensure retention and performance.

#leads

measure of **progress**

#LEAD is the number of **people intend to apply for specific position or joining AIESEC**

#LEAD can tell us if the **Talent pool is enough to fulfil into needed position** or should we find more potential talents

They are called LEAD when:

- ✓ They show the interest for the higher position (through national surveys or different official platforms)
- ✓ We know where are they to attract & nurture (sign up on aiesec.org or specific CSRM platform).

#apd

measure of **progress**

After getting acceptance for the role, this people need to go through a **preparation process** to get ready for the role.

It's called **#APPROVED** when member is **READY TO START** the Realisation (ready to perform, ready to engage and develop leadership with AIESEC)

❖ *This number could tell if we fulfil #Ideal HR for the org. or not.*

We can define a member approved from the 1st MX Standard deliver to them -

It's the beginning of the **onboarding process**, and the main focuses are to make sure that members are connected with the organization, the team and what aiesec can bring to them personally (in case of recruitment), and with their jd, management style, education and clarity of team member (in case of transition from a role to another).

#re

measure of **progress**

#REALISATION is counted by the first day of work of the member (the first practical activity done in the role covered - receiving capacity building is NOT considered the first day of work).

This number could tell us:

✓ When is the peak of Realisation and we can do backward planning to calculate when is the peak of Applicant - Accepted - Approved

✓ In order to make this cycle happen, we need to deliver the MX standards for them

It's conversion could tell us:

- efficiency and effectiveness of onboarding process and onboarding standards delivery.
- process time and how much it take to people to get onboarded and how much our current process takes time and how to optimize them.

%retention rate

measure of **progress**

how to measure it:

(#members at the end of the month - #acc from recruitment)

/ (#members at the beginning of the month - #acc from recruitment)

how much we were able to retain out membership **underlines the capacity and processes that nurtures the reasons why people wants to stay in the organization.** it's a measure of progress, means that is influenced (mainly from mx standards, members achieving their goal, engagement of your membership, etc)

%nec & %lec

measure of **process**

how to measure it:

average between the %PvA of lec/nec delivery and the % of people that received the education.

e.g: 75% delivery - 50% people received the education = 62% implementation

Is the % of education implemented in our plenary. How much, compared to what planned, **our plenary has the knowledge to perform in our programs.**

underlines the **capacity of our member to fulfill confidently their activities.** If the implementation is high, but the performance is low, it helps us understand what is the education processes, or methodology is not currently fitting our membership.

%pipeline

measure of **progress**

how to measure it:

#people willing to apply for higher positions / #members in the organization

how many people are interested to apply for higher position - our potential pools of applicants.

underlines the capacity and processes that nurtures the reasons why people want to take leadership positions.

%mxs imp.

measure of **process**

how to measure it:

average between the %PvA of mxs delivery and the % of people that received the education.

e.g: 75% delivery - 50% people received the mxs = 62% implementation

which spaces and standards are we delivering to ensure I&O development.

underlines the capacity and processes that connects the individual and organisational goal by taking ownership of the work we do.

it should be track based on the timeline of delivery, to best understand in which standards we have bottlenecks.
